Draft Graphics

• Which domain in the areas of development is scored the lowest and highest in which age group and overall?

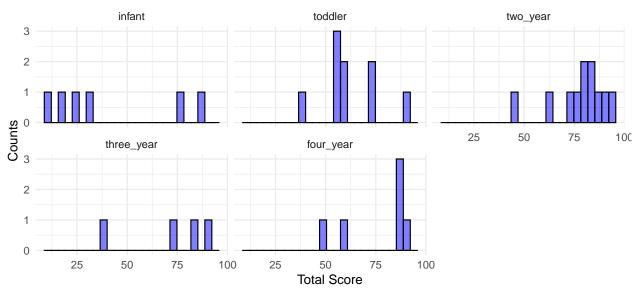

Number of Passes and Fails by Language Development Score

- How does score vary by age group?

```
gf_histogram(~TotalScore, data=UMCH, fill="blue", color='black') %>%
gf_labs(title="Total Scores by Age Group", x="Total Score", y="Counts") + facet_wrap(~AgeGroup)
```

Total Scores by Age Group

Draft Models

##

For all models, we used linear regression model because it is used to show/predict the relationship between variables where the response variable is continuous. We can use up to 2 predictors given the size of the data (36/15). We will not add any interaction or random effect due to the size of the dataset. Our predictors will be Age and Gender because all other variables contributes to the Total Score which does not make logical sense to include those.

Model Predicting PhysicalDevelopment

```
Response variable: PhysicalDevelopment
Predictor(s): Age, Gender
Regression model: Linear regression
mod_phy <- lm(PhysicalDevelopment ~ Age + Gender,</pre>
          data = UMCH)
summary(mod_phy)
##
## Call:
## lm(formula = PhysicalDevelopment ~ Age + Gender, data = UMCH)
##
## Residuals:
